Printing

UMT allows you to print individual messages or group of messages on Postscript printer.

Filters

With our product "Ultimate Mail Tool" we propose you "intelligent way" to handle your e-mail. Using UMT you will never have problems handling huge amounts of electronic mail. Incoming mail is "filtered". Filters are created by filling simple screen form. There is no special language for creating filters. Using filters you can set up automatical handle of some messages: you can put it in some folder, forward to another address, reply with some text, delete, or combinate the actions listed above. If there is no matching filters, message will be placed in 'Incoming' folder.

Address book

You can store e-mail addresses in Address Book. You can use it to specify addressee while composing new message. While creating new entry in Address Book you can specify network of your addressee and type in his address in format, native for this network. More networks will be supported. You can "steal" address and name from received message

Manual

Printed user manual is included.

Licensing

We offer you flexible licensing policy:

1. Single user license
2. Multi-user license
3. Trial license

All updates are sent to you free of charge over e-mail.
